

Indu E-commerce Web Application

User Manual

Introduction

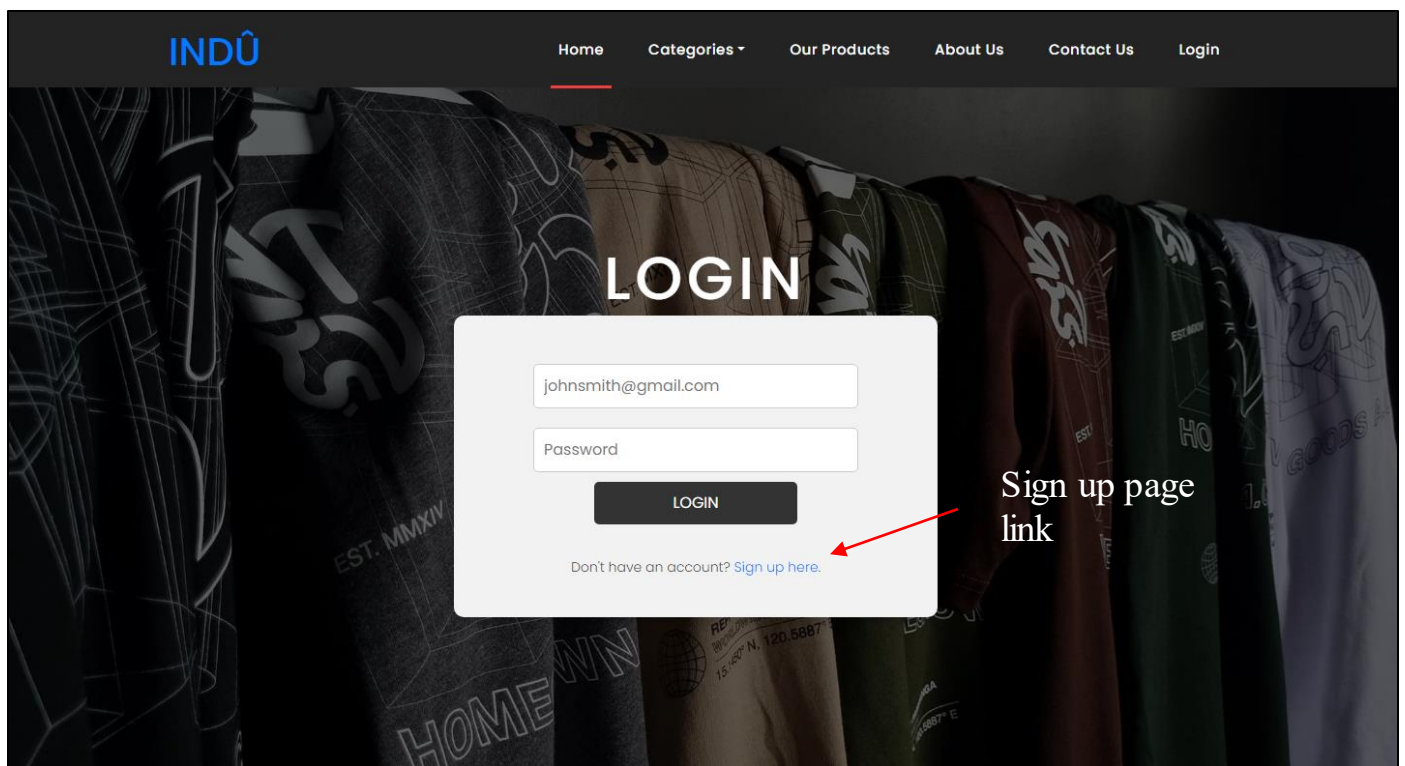

The INDU E-commerce Web Application is a simulated clothing app that offers an efficient exploration of trendy apparel, including statement tees, graphic tees, and stylish caps. Designed to provide an engaging user experience, this app showcases a virtual catalog filled with eye-catching designs that cater to various styles and preferences.

Users can effortlessly browse through different collections, discovering unique clothing items that catch their eye. The intuitive interface allows users to add their favorite pieces to a virtual shopping cart, curating a personalized selection of desired items.

When it's time to complete the shopping experience, users can simply click the checkout button, initiating a straightforward one-step process to finalize their order. This simulation provides a clear demonstration of how an e-commerce platform operates, highlighting the essentials of online shopping, from product selection to a quick and easy checkout.

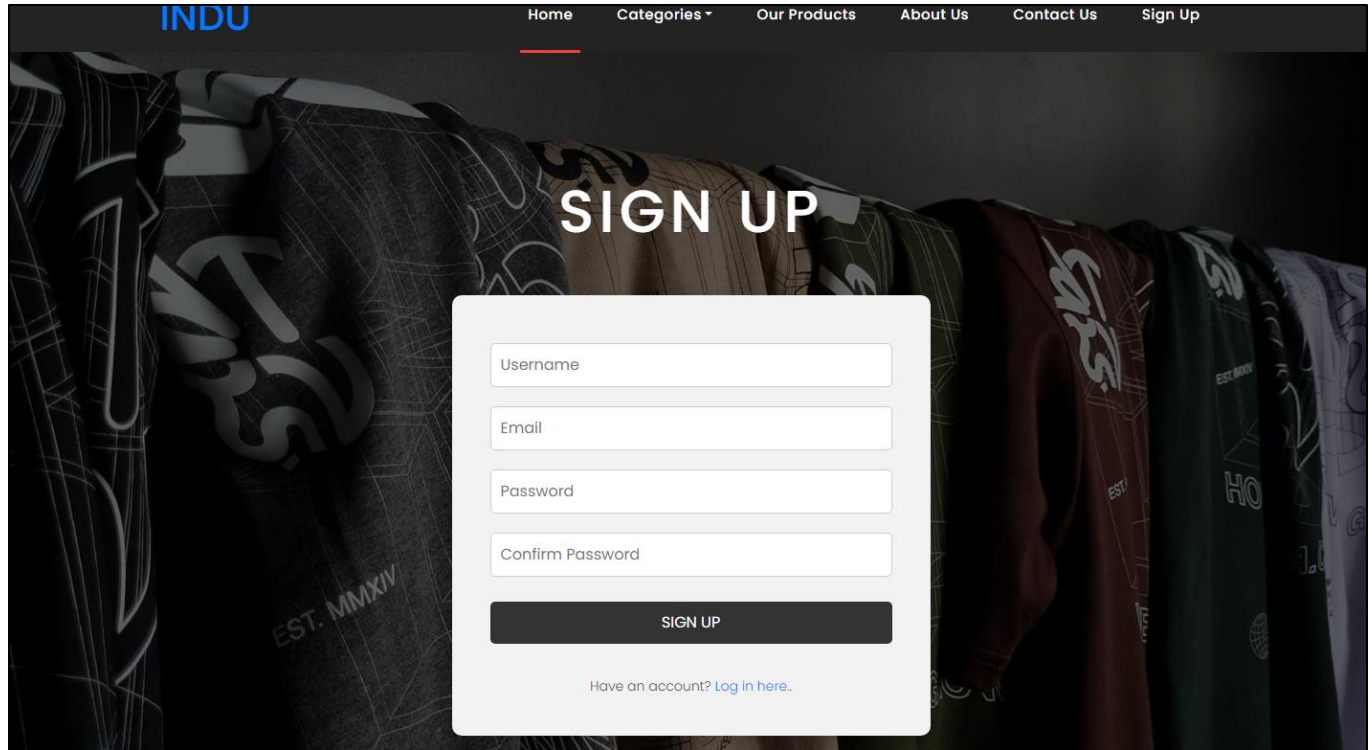

Log In and Sign Up Process

To shop on INDU E-commerce, users must create an account prior to browsing or making purchases. If a user tries to purchase a product or access the orders or cart page without being logged in, they will be automatically redirected to the login page.

Login Page

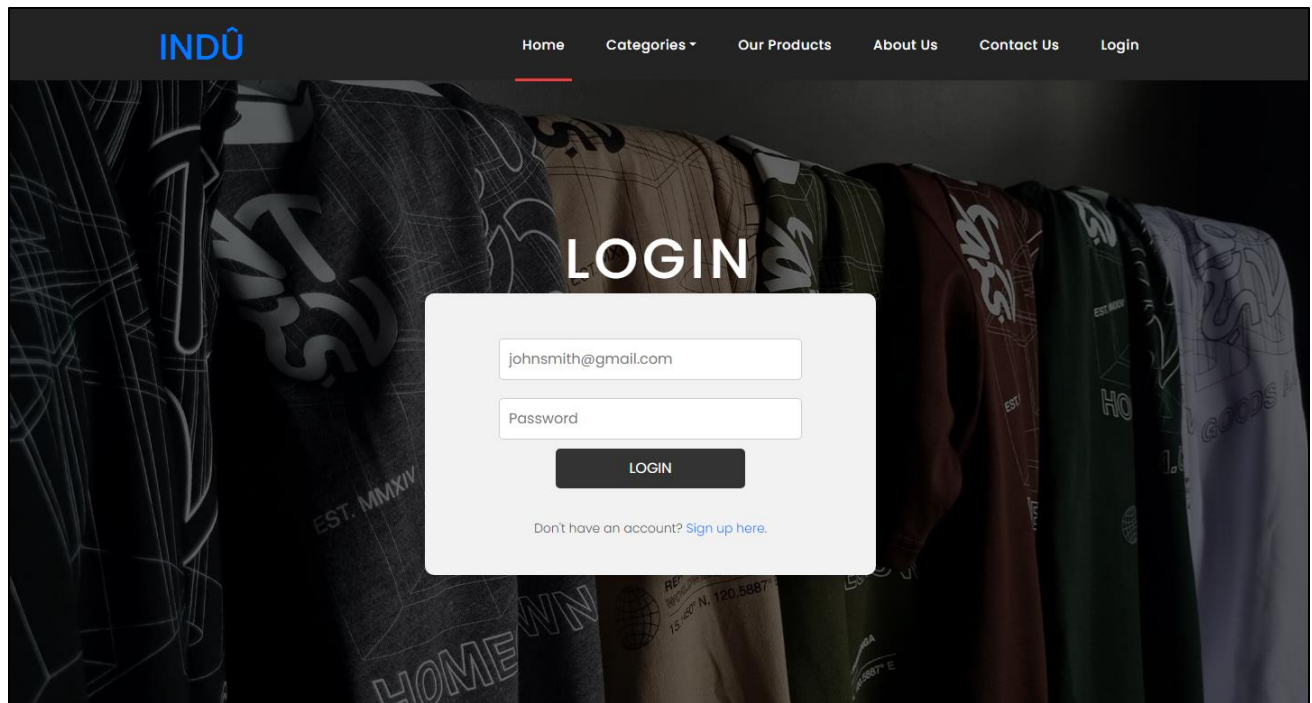

Users with existing accounts can log in to their customer accounts by providing their registered email and password. For first-time users, the sign-up page can be accessed via the '**Don't have an account?**' link located below the login modal.

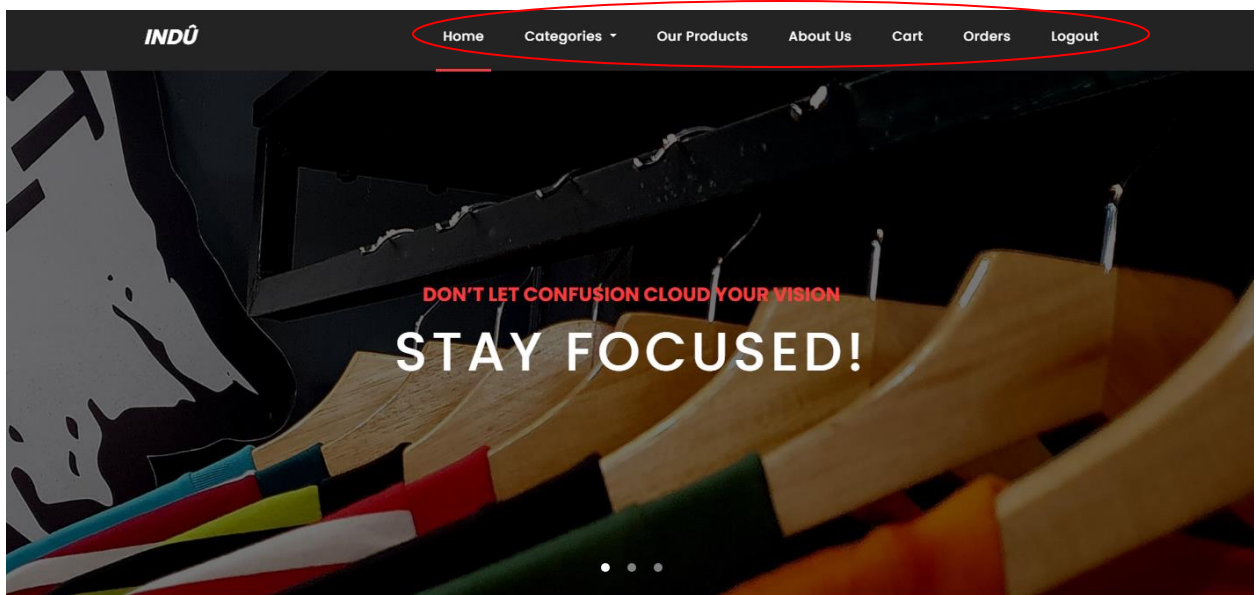

Sign up Page

During the sign-up process, users are required to input the following information: a unique username, an email address, a password, and a confirmation of their password. The confirmation ensures that the password entered matches the original entry, enhancing account security.

After a successful registration, the user is redirected to the **login page**, where they can input their registered credentials.

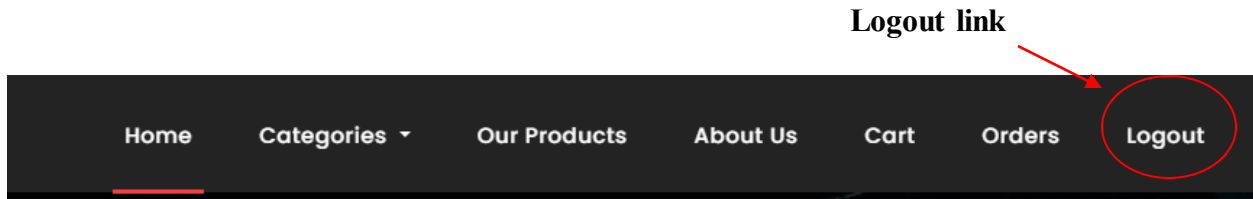

Once a successful login is executed, the user is redirected to the **home page**.

Activate Windows
Go to Settings to activate Windows.

On the home page, a plethora of navigation links are present for the user to explore.

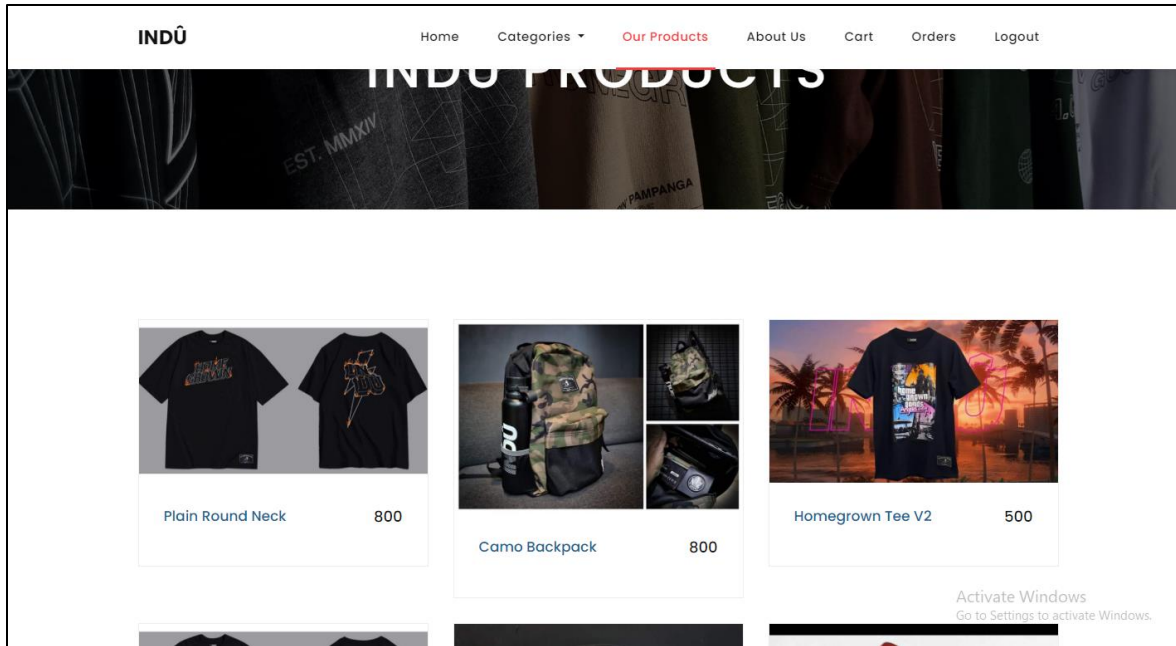

As observable, the initial login link changes to a logout link, indicating that a session has been created. If a user wishes to log out, they can click the logout link, which will redirect them back to the login page.

Products Navigation Process

To view all listed products, the user can select the **Our Products** link.

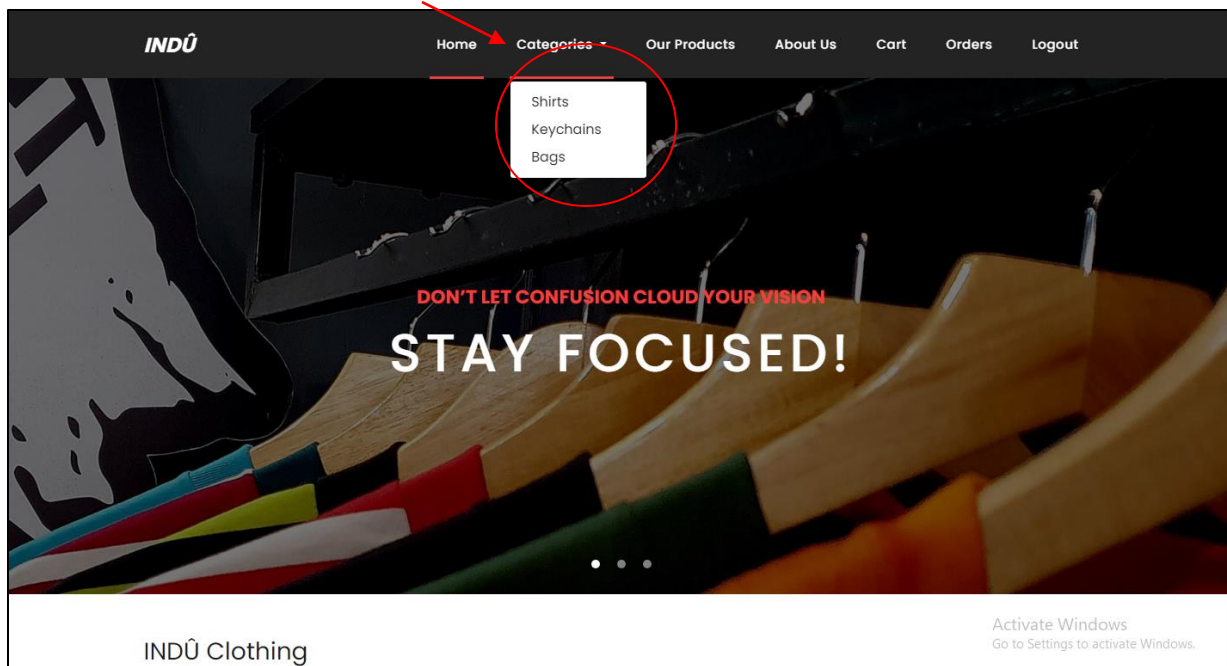

Our Products Page

The user will then be taken to a page where all the products in the store are displayed, regardless of category.

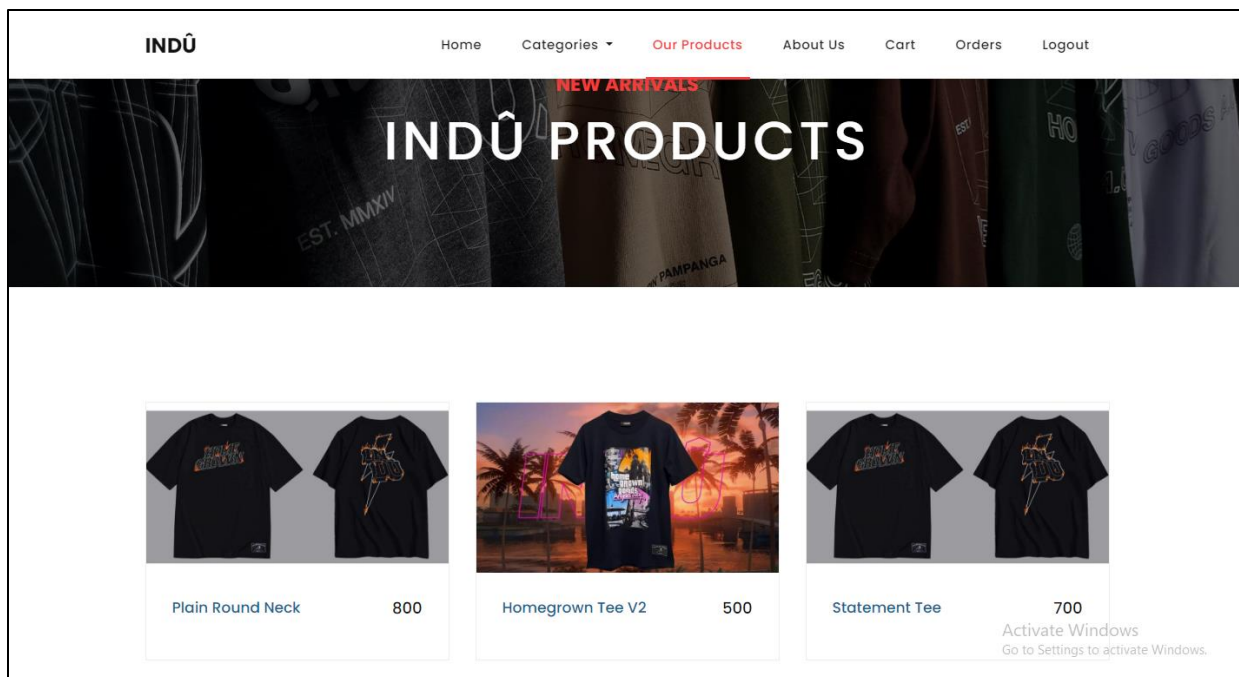

Filter products by their category

Users have the ability to filter products by category through a dropdown menu that displays all available product categories; selecting a category will update the displayed products to show only those relevant to the chosen category.

Categories Dropdown

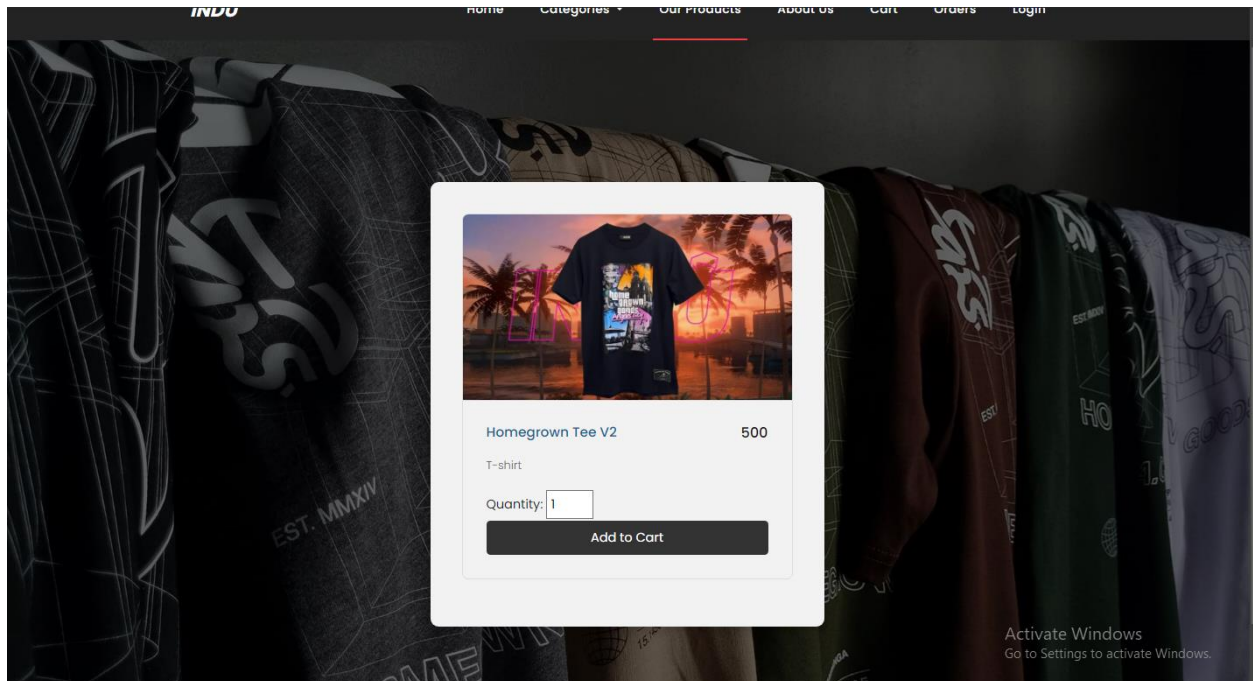

To filter products by their respective categories, the user can click on any category displayed in the dropdown menu.

Upon doing so, the user is redirected to a page displaying all products in their selected category.

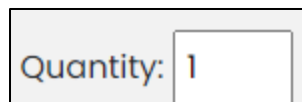

Ordering Process

To order an item, the user can click on the product card of the desired item, which will redirect them to a view page containing all the product's details, along with inputs for quantity and an add to cart button.

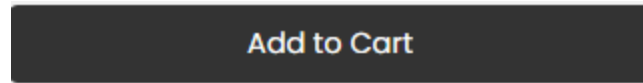

Product view page

The user can change the order quantity based on preference.

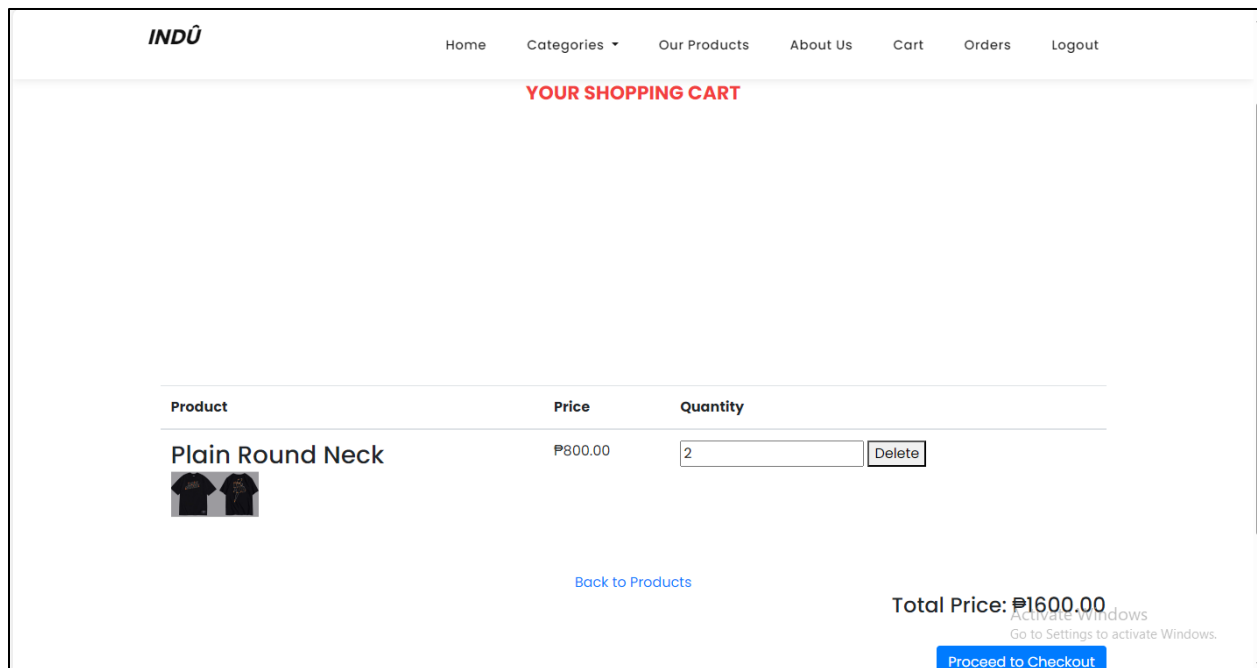

Order Quantity input

When ready, the user can add the item to the cart by clicking the 'Add to Cart' button.

Add to cart button

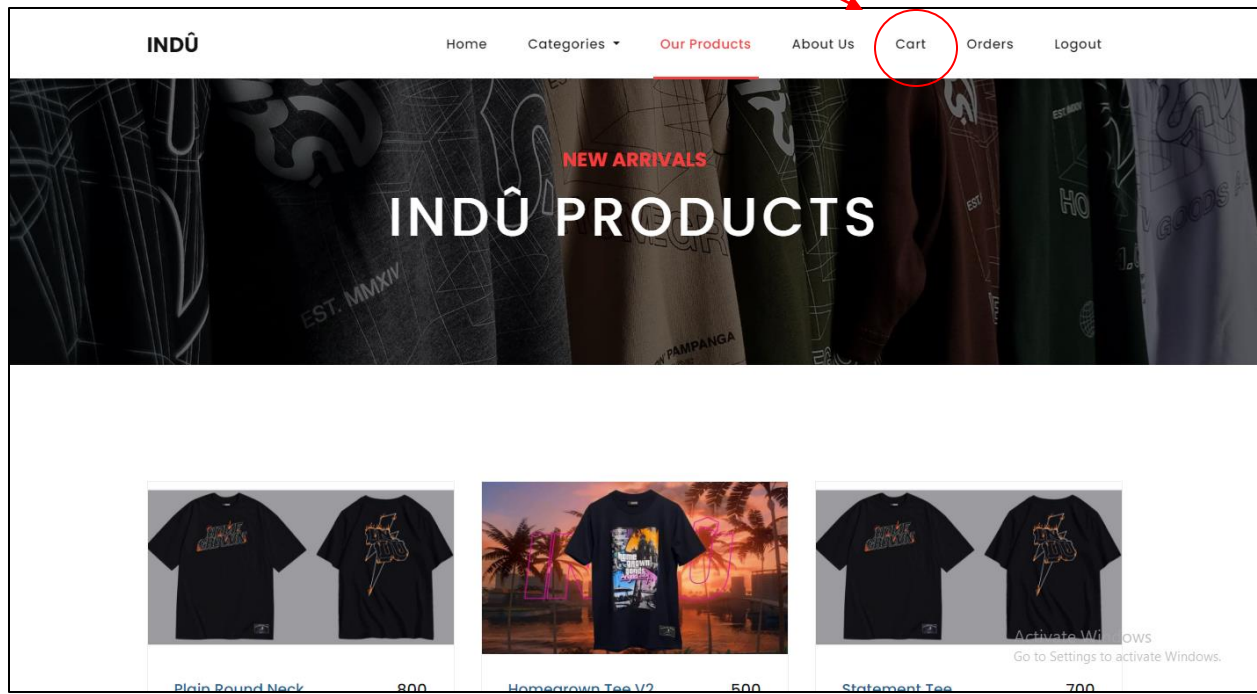

After clicking the add to cart button, the user is redirected to the cart page containing all of the user's added products.

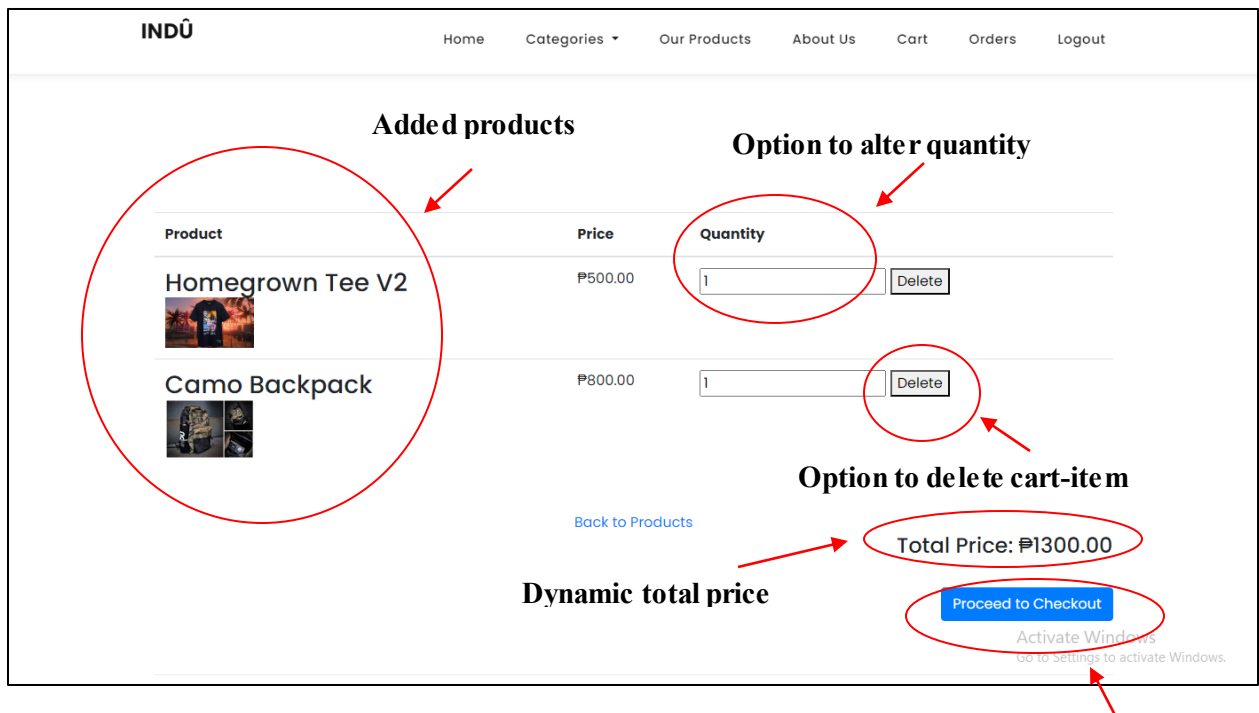

User cart page

Users are able to check the contents of their cart by selecting **the cart link** in the navigation bar.

User Cart Link

*Cart Page***Checkout button**

As observable, all of the added products by the user are displayed in the cart page.

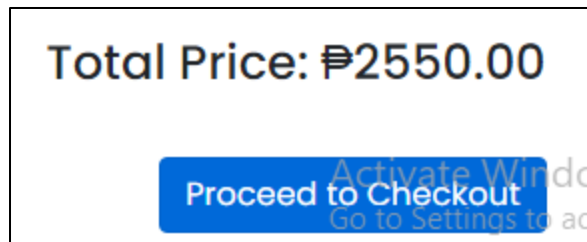

Update a cart item's quantity

To update the quantity of a cart item, the user can just simply input a different amount in the quantity input.

A close-up of the quantity input field for a cart item. It shows a text input box containing the number '2' and a 'Delete' button to its right.

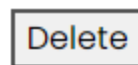

Quantity Input

The total price would also be updated consequently.
